<i>Preface</i>	<i>page ix</i>
Chapter 1 Structural organization of the nervous system	1
1.1 Nervous systems	1
1.2 The anatomy of a neuron	2
1.3 Non-myelinated nerve fibres	2
1.4 Myelinated nerve fibres	4
Chapter 2 Resting and action potentials	9
2.1 Electrophysiological recording methods	9
2.2 Intracellular recording of the membrane potential	11
2.3 Extracellular recording of the nervous impulse	13
2.4 Excitation	16
Chapter 3 The ionic permeability of the nerve membrane	21
3.1 Structure of the cell membrane	21
3.2 Distribution of ions in nerve and muscle	24
3.3 The genesis of the resting potential	25
3.4 The Donnan equilibrium system in muscle	27
3.5 The active transport of ions	28
Chapter 4 Membrane permeability changes during excitation	34
4.1 The impedance change during the spike	34
4.2 The sodium hypothesis	34
4.3 Voltage-clamp experiments	39
4.4 Patch-clamp studies	47
Chapter 5 Voltage-gated ion channels	49
5.1 cDNA sequencing studies	49
5.2 The primary structure of voltage-gated ion channels	49
5.3 The sodium gating current	53
5.4 The screw-helical mechanism of voltage-gating	55
5.5 The ionic selectivity of voltage-gated channels	59
Chapter 6 Cable theory and saltatory conduction	63
6.1 The spread of potential changes in a cable system	63
6.2 Saltatory conduction in myelinated nerves	65
6.3 Factors affecting conduction velocity	70
6.4 Factors affecting the threshold for excitation	71
6.5 After-potentials	72

Chapter 7	Neuromuscular transmission	74
7.1	The neuromuscular junction	74
7.2	Chemical transmission	75
7.3	Post-synaptic responses	76
7.4	Pre-synaptic events	84
Chapter 8	Synaptic transmission in the nervous system	87
8.1	Synaptic excitation in motoneurons	87
8.2	Inhibition in motoneurons	90
8.3	Interaction of IPSPs with EPSPs	91
8.4	Pre-synaptic inhibition	92
8.5	Slow synaptic potentials	92
8.6	G-protein-linked receptors	94
8.7	Electrotonic synapses	97
Chapter 9	The mechanism of contraction in skeletal muscle	99
9.1	Anatomy	99
9.2	The structure of the myofibril	100
9.3	The sliding-filament theory	103
9.4	The molecular basis of contraction	106
Chapter 10	The activation of skeletal muscle	112
10.1	Ion channels in the membrane of skeletal muscle	112
10.2	Action potential generation in surface and tubular membranes of skeletal muscle	113
10.3	Excitation-contraction coupling in skeletal muscle	115
10.4	Involvement of Ca ²⁺ ions in excitation-contraction coupling	116
10.5	Internal membrane systems	118
10.6	Triggering molecules for the release of sarcoplasmic reticular calcium	119
10.7	Tubular voltage detection mechanisms triggering excitation-contraction coupling	121
10.8	Calcium release from the sarcoplasmic reticulum through the ryanodine receptor	124
10.9	Triggering of ryanodine receptor opening through configurational coupling to the dihydropyridine receptor	125
10.10	Restoration of sarcoplasmic reticular calcium following repolarization	126
10.11	Overview of excitation-contraction coupling in skeletal muscle	128
Chapter 11	Contractile function in skeletal muscle	129
11.1	Isometric and isotonic contractions	129
11.2	Isometric twitch and tetanus	130

11.3	Isotonic contractions	132
11.4	Energetics of contraction	135
11.5	Work and power	135
11.6	Heat production	137
11.7	Efficiency	137
11.8	The energy source	138
11.9	Muscular fatigue	140
11.10	Energy balances during muscular exercise	141
11.11	Ionic and osmotic balances during muscular exercise	142
11.12	The effects of training	144
<hr/>		
Chapter 12	Cardiac muscle	146
12.1	Structure and organization of cardiac cells	146
12.2	The electrical initiation of the heartbeat	146
12.3	The cardiac action potential	148
12.4	Ionic currents in cardiac muscle	149
12.5	The electrocardiogram	152
12.6	Cardiac excitation-contraction coupling	154
12.7	Nervous control of the heart	157
12.8	Cardiac arrhythmogenesis	158
<hr/>		
Chapter 13	Smooth muscle	162
13.1	Structure	162
13.2	Excitation	163
13.3	Excitation-contraction coupling	164
13.4	Contractile mechanism	165
13.5	Mechanical properties	167
